

ANUJ SINGH

AI Engineer & Full-Stack Developer | Startup Builder

Mohali, Punjab, India | justchilldude686@gmail.com | github.com/anujsingh-cse | [LinkedIn](#) | cal.com/anuj-singh-cse

PROFESSIONAL SUMMARY

Full-Stack AI Engineer with hands-on experience shipping production-grade LLM applications, SaaS platforms, and AI automation products. Architected RAG pipelines for document processing, built real-time event analytics systems, and launched a revenue-generating B2B SaaS. Core strengths in React, Next.js, TypeScript, Python, and cloud-native AI systems. Seeking high-impact engineering roles where I can drive measurable product outcomes from day one.

EXPERIENCE

Data Scientist — The Boring Education

Mar 2026 – Present

Full-time · On-site (Bangalore) | Python, Machine Learning, Data Pipelines

- Built data pipelines and optimized machine learning models for educational platforms to enhance learning outcomes.
- Engineered automated workflows and predictive analytics pipelines to improve student engagement.

Data Analyst — V.EDU'S PRIVATE LIMITED

Jan 2024 – Oct 2024

Internship · Remote | Python, Retrieval-Augmented Generation (RAG), ML

- Worked on data science and machine learning projects leveraging Python and Retrieval-Augmented Generation (RAG) pipelines.
- Applied ML models and data-driven approaches to solve business problems in an ed-tech environment.

Freelance Software Developer — Freelance

2024

Remote | Python, Automation, Upwork

- Built a custom automation script for a small business client using Python (Upwork) to streamline operations and eliminate repetitive tasks.

TECHNICAL PROJECTS

YojanaSetu — AI-Powered GovTech Platform

[GitHub](#) [Live](#)

Next.js, React, TypeScript, Python, FastAPI, OpenAI API, LangChain, Pinecone, PostgreSQL, AWS

- Architected a **RAG-based eligibility engine** using LangChain + Pinecone to automate government document processing and citizen eligibility verification.
- Engineered a **multi-lingual voice agent** integrating OpenAI Whisper and local LLMs to serve users across 12 regional languages, including non-literate populations.
- Optimized Next.js frontend performance and PostgreSQL database queries to improve API response times and mobile user experience.

Agent Parliament — Multi-Agent Legislative Simulator

[GitHub](#)

Next.js, React, TypeScript, Tailwind CSS, OpenAI API, Framer Motion, LangChain

- Architected a legislative multi-agent debate framework using distinct persona prompt systems representing development priorities (speed, security, UX, compliance).
- Engineered a consensus-based decision synthesis engine with weighted voting to generate comprehensive architectural audit reports, reducing meeting overhead by 70%.

AutoInvoice OCR — B2B SaaS Invoice Extraction

[GitHub](#) [Live](#)

Python, AWS Textract, Next.js, Stripe, Supabase

- Built a micro-SaaS extracting structured JSON from scanned invoice PDFs by combining OCR (Tesseract/AWS Textract) with LLM-based layout parsing for high accuracy on non-standard formats.
- Integrated Stripe payments, direct ERP API integration, and a human-in-the-loop confidence-scoring review UI.

DevRel GitHub Agent — Open-Source AI Maintainer

[GitHub](#) [Live](#)

TypeScript, Probot, OpenAI API, GitHub Actions

- Created an autonomous GitHub App using Probot that triages incoming issues via semantic analysis, auto-labels them, and drafts pull requests for simple bug fixes (typos, dependency updates, basic logic errors).

EDUCATION

BE, Computer Science & Engineering — Chandigarh University

Oct 2022 – May 2026

SKILLS

Frontend

React, Next.js, TypeScript, Tailwind CSS, Framer Motion

Backend

Node.js, Python, FastAPI, Go, PostgreSQL, Redis

AI / ML

OpenAI API, LangChain, LangGraph, RAG, Pinecone, PyTorch, Whisper

DevOps

AWS, Docker, Vercel, CI/CD, GitHub Actions

Tools

Git, Figma, Stripe, Supabase, Kafka, ClickHouse

FOCUS AREAS

- AI Agents & Multi-Agent Systems
- RAG & Vector Databases
- LLM Application Dev
- Full-Stack SaaS Architecture
- Cloud-Native Deployment

KEYWORDS

React Next.js TypeScript Python
Node.js Go LLM RAG
LangChain OpenAI AWS Docker
PostgreSQL FastAPI CI/CD Kafka
Redis SaaS Startup Agile

- Published research paper on "**Efficient LLM Fine-Tuning**".
- Developed university's official student portal serving the active student body.
